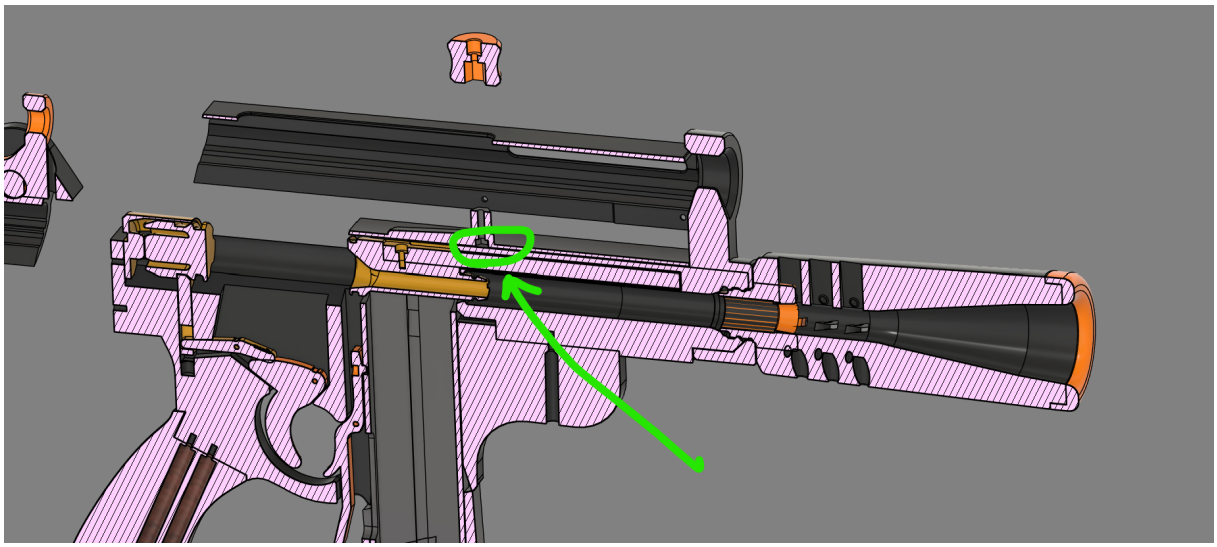
Instruction

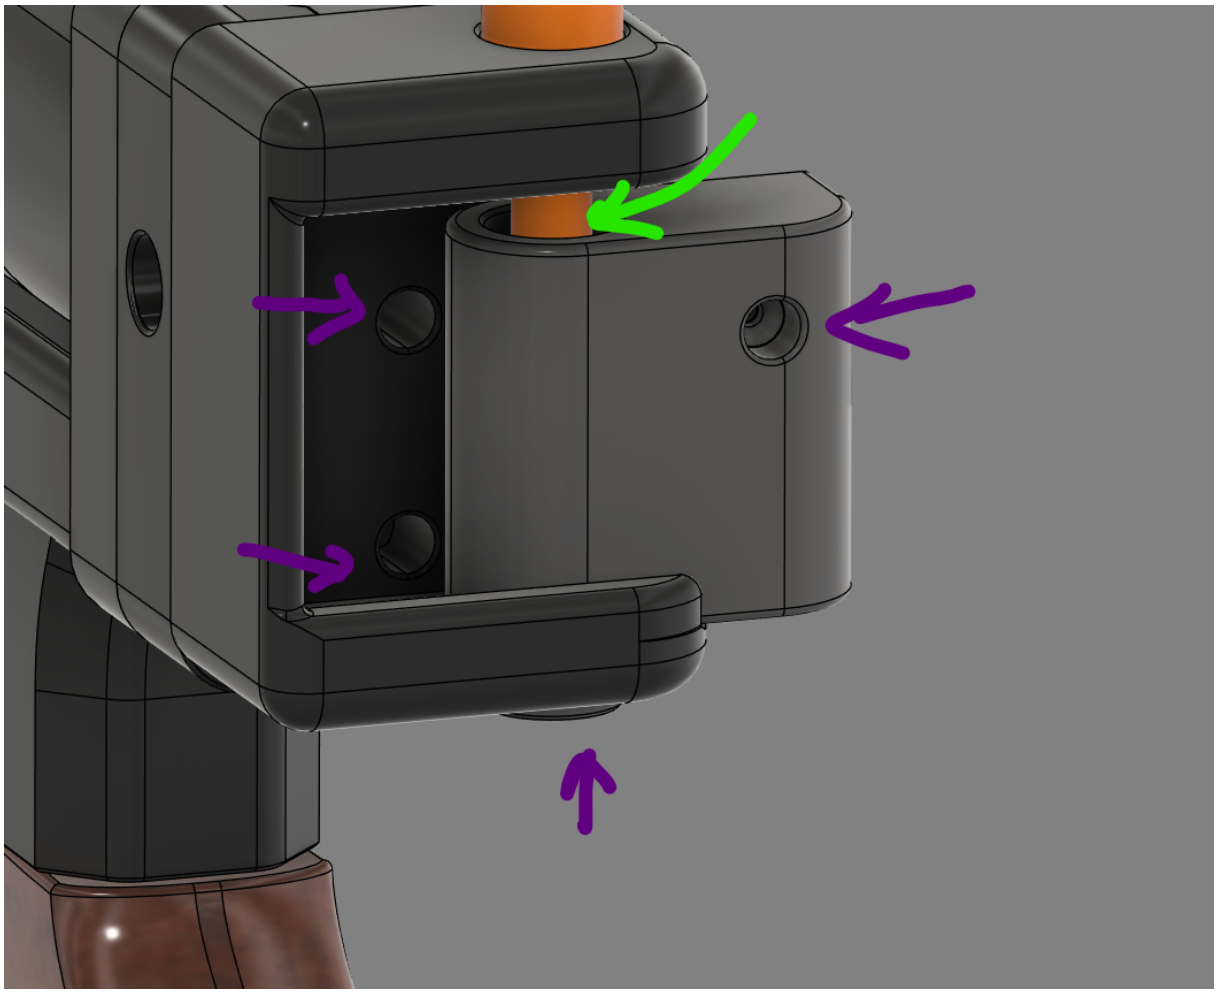
This shares most of the Knave format and assembles pretty much the same, with the following exceptions:

Place an M3 nut under the bolt, secure with the M3x290mm screw before sliding onto the main body, bend the Receiver cover around, remove the bolt to attach the Prim Grip knob, and put the M3 screw back



The folding stock attachment will need the large spring (green location), plus qty 4 #4 screws (purple)

Edit: Use M3x14mm self-tap at the connection with the wire stick



Also, qty 2 #4 screws in these two locations
