I’ve completely reworked and upgraded the design to make it more realistic, faster to print, and much easier to assemble.

I have Redesigned it to make it look more realistic.

**Illuminated Caliper:** The caliper now features a built-in glowing effect that looks incredible in the dark.

**No screws needed (Snap-Fit):** I completely removed the need for bolts! The entire assembly now uses a satisfying and secure snap-fit mechanism.

**Optimized Print Time:** Tweaked the geometry to print significantly faster while saving filament without sacrificing quality.

**Custom Inserts & Logos:** Want to customize your caliper? A huge collection of different inserts and logos for this lamp is available exclusively on my **Patreon**.

**Assembly Instructions:** Building it is super easy! You can find the step-by-step instruction file attached directly in this description, or watch the full assembly video guide on my **Instagram**.

Happy printing! If you like this model, please leave a like and share your makes!
