Tags: whistle fastprint extreme lightweight nosupport loud 5m

This **Whistle** is built for one purpose: being as loud as possible. Every printed unit is **guaranteed to exceed 124 dB**, making it one of the loudest whistle designs you can print — well into the range where hearing protection matters.

⚠ **Safety warning:** Prolonged exposure to sound over 124 dB may cause permanent ear damage. This whistle is genuinely loud — please don't blow it directly next to anyone's ear, and be mindful of repeated close-range use.

Key features:

- **Print-in-place** — no assembly required, comes off the print bed fully functional.

- **Guaranteed loudness** — every print tested and verified to exceed 124 dB.
- **Keychain-ready** — integrated loop for attaching to keys, bags, or gear.
- **Compact and durable** — small enough for everyday carry, sturdy enough for real use.

Use cases:

- Emergency and safety signaling — hiking, camping, outdoor activities where being heard from a distance matters
- Coaching, refereeing, or crowd/attention-getting situations
- Everyday carry (EDC) on a keychain or bag

Printing tips:

- Print in the orientation shown in the photos for the cleanest print-in-place result with no supports needed.
- A fine layer height (0.12–0.16mm) helps the internal air channel form cleanly, improving tone consistency and maximizing volume.
- PLA works well; a slightly stiffer filament may hold tone quality longer with heavy use.

Extremely loud, genuinely functional — use responsibly, and keep it away from ears at close range.
