Summary

I'm currently obsessed with castles, so I just had to add a birdhouse to my collection of castles.

I'm currently obsessed with castles, so I just had to add a birdhouse to my collection of castles.

Technical Specifications:

Depending on the print settings, this super cute birdhouse weighs about 1 kg (1,000 grams). Its base measures 210 mm x 210 mm, and it stands 321 mm tall. It can be easily printed in PETG or PLA. Everything is slotted together and secured with superglue. There is a mounting rail on the back. This can be attached to round objects. With an adapter, it can also be mounted on walls. It can be screwed in place or secured with cable ties.

If anyone is wondering whether a lake forms on the roof when it rains: No, the castle has several drains on each side of the roof. Yes, I thought of that ;-)

All you need for this birdhouse is a 10mm rod—it can be made of wood, carbon fiber, or any other material—that a bird can perch on.

All you need for this birdhouse is a 10mm rod—it can be made of wood, carbon fiber, or any other material—that a bird can perch on.

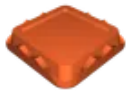

Visit my profile; I have more castles in my portfolio that you might like. If you liked something, feel free to leave a “LIKE.” Thanks

I recommend the following default settings:

- min. 2 walls
- PLA, PETG
- min. 10% infill
- Support material if needed

Please make sure your printer is well calibrated!
