Forest Leaves

Leaves are one of the most colorful treasures of the woodland world — and this set brings together three of the forest's most recognizable leaves: the maple leaf , the oak leaf and the beech leaf . Each has its own unique shape, and together they capture the beauty of the changing seasons, from fresh spring green to the warm golden, orange and red colors of autumn

Every tree can be recognized by its leaves. The maple has a wide leaf with pointed lobes, the oak has a leaf with soft wavy, rounded edges, and the beech has a smooth oval leaf with a gently toothed edge and straight

veins. Comparing these shapes is a wonderful way for children to discover different trees and learn to recognize them on a forest walk.

Leaf Facts

- Maple leaves have pointed lobes, and in autumn they turn bright yellow, orange and red
- Oak leaves have rounded wavy lobes and grow on the same trees that give us acorns
- Beech leaves are oval with straight, parallel veins and turn copper-brown in autumn
- Leaves make food for the tree from sunlight, water and air in a process called photosynthesis *
- In autumn the green color fades and the hidden yellow, orange and red colors appear before the leaves fall

Stories & Woodland Adventures

- Leaves appear in children's books, autumn stories, seasonal crafts and magical forest adventures
- Often connected with autumn walks, crunchy leaf piles, acorns, chestnuts, mushrooms and cozy forest days
- A lovely tool for nature learning: matching leaves to trees, sorting by shape and color, and exploring the seasons
- A perfect addition to forest small world play, seasonal tables, nature corners and woodland animal scenes
- Their beautiful shapes and colors continue to inspire nature play and spark children's curiosity about trees and the circle of the seasons
