Summary

Medal display that fits on an IKEA Skadis pegboard. The medal is secured using its own ribbon.

Printed in PLA, 15% infill, using a HF 0.6 nozzle, 0.20mm Structural default settings. Print with the front face laying flat on the print bed, so the pegboard supports are facing up. I tried both using auto generated supports as well as no supports and the results are about the same.

The ribbon gets fed through the display so that it both secures the medal and keeps the ribbon tidy. I was inspired by this design on some other wall mounted medal displays, and modeled it myself for an IKEA Skadis. You can secure the ribbon however you'd like, but this is what worked best for me:

The medal_display file accommodates most medals, and the XL file accommodates wider medals.
