Summary

This remix adds QD sling mounting sockets to the German Shepard barrel, and fixes the rear Breacher sockets.

Tags: [nerf](#) [sillybutts](#) [breacher](#)

This mod addresses the tolerance issues of the original Breacher QD sockets being too small, while adding stops to limit the rotation of the sling loops (which lock securely into position every 45 degrees). This includes the files for both alternate rear sling mounts, and a modified version of the rear half of the German Shepard barrel with sockets. There are sockets on both sides for all three parts (fully ambidextrous). I have also included .step files in case you want to modify the design or socket tolerance or whatever.

DISCLAIMER:

In my light-use testing, I've had no issues with the sling coming loose. BUT, the Breacher is a fairly heavy blaster. Printed sling mounts are nowhere near as rugged as real-steel aluminum or steel sockets, and too

much force on the sockets may cause the sling to break loose, causing damage to the blaster and potential personal injury. I accept no responsibility for any damage or injury caused by use, misuse, or abuse of this mod.

PRINT SETTINGS:

Same as the original models. You'll obviously need to download those from their respective pages:
