Ever wanting to try drift up daring heights just like Ken Block. Well then, print the ALL NEW Hoonigan Shifter Knob designed to fit the TH8s Racing Wheel Shifter. Split in two peices to put together when you want to go drifting, racing, or just touring. Once you have had your driving experience, you can take the upper handle off and store it nice and tidy

files for adapter and design peice:

Printing

15% infill or higher for the upper handle for strength while **sending it** and 2-3 walls, maybe .16mm to .2mm layer height.

25-100% infill for lower adapter and 2-3 walls. .16-.2mm layer height.

Sadly I dont have the shifter for better product photos....YET

Model files
