This is a 3d printable Olympic Podium style display stand that holds 3 Lego minifigures. There are two file options; plain or numbered. The numbered file has each level labeled with 1, 2, and 3 (refer to pictures). I recommend printing in PETG, but PLA worked fine for me. If printing in PLA, the fit may loosen over time if the figures are taken on and off too much. Due to the difference in printer and filament quality, your stand may be loose or tight so you may need to scale the model. I designed this stand in Fusion and printed it in Bambu PLA Matte using my Bambu P1S printer. **I have also made a stand for 1, 2, 3, 4, and 5 minifigures**, so go check out my profile for more cool models. I can't give all the credit to myself, because the Idea to design this came from creator [Ascendk2](#), check out his profile, he has some cool models. Please let me know how your print went and if

you have any questions or problems, I am also very grateful for every download, like, rating, and follower.
