Tags: **3030** **3030extrusion**

This is a horizontal panel support clip that drops into 3030 extrusions to hold up a sheet of plywood, plastic etc. for example for building shelves. I needed clips for 12mm / 1/2" plywood, but I made a few other sizes for thinner sheets as well.

My extrusions are from this vendor: <https://8020.net/30-3030.html>. This model is loosely inspired by another [model on MakerWorld](#) that I tried that unfortunately didn't fit these extrusions, the fit was too tight.

I designed this one from scratch in Fusion 360 based on the dimensioned drawings from the extrusion vendor. The model uses Fusion's configurations feature to derive the various sizes. You can download the CAD model here and add more configurations: <https://a360.co/4yoe35T>
