Mine were printed on a stock prusa mk4 and they're super tight. You may need to scale them up if your printer prints differently than mine. There is a gap of a few mm between the pieces so you can scale up quite a bit before they would hit each other.

Fatty - just a big fat knob.

Paddle- easy to grip and spin, nice visual feedback at a glance kind of Notch - you can put your finger on it and spin it easily without grabbing the knob.

I've included STEP files so you can modify them more easily if you're into CAD.
