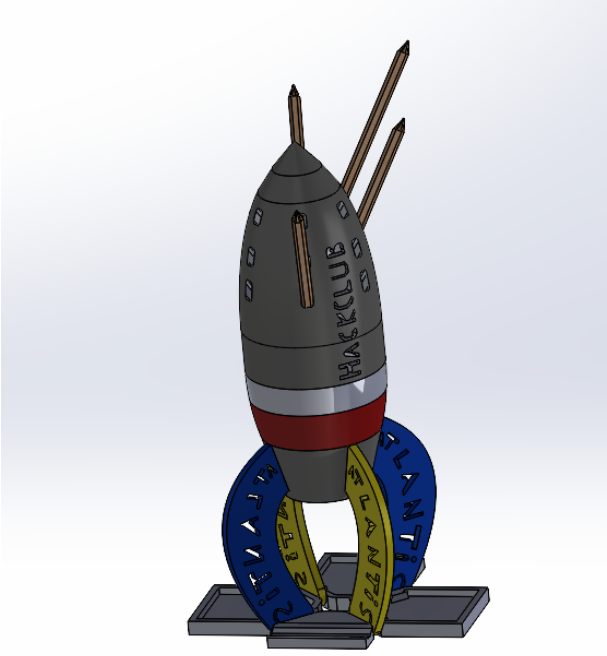
## Summary

a slightly modular pen holder in the shape of a rocket

Hobby & Makers > Organizers

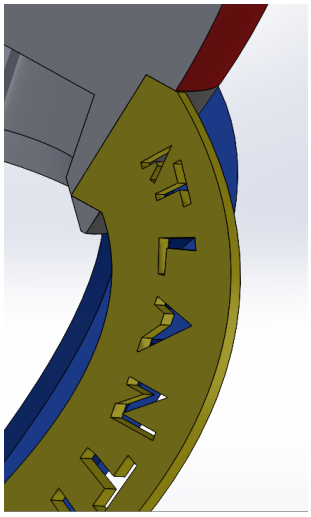
### Its a cool spinning rocket desk organizer meant for pencils and more(slightly modular).(350mm tall)



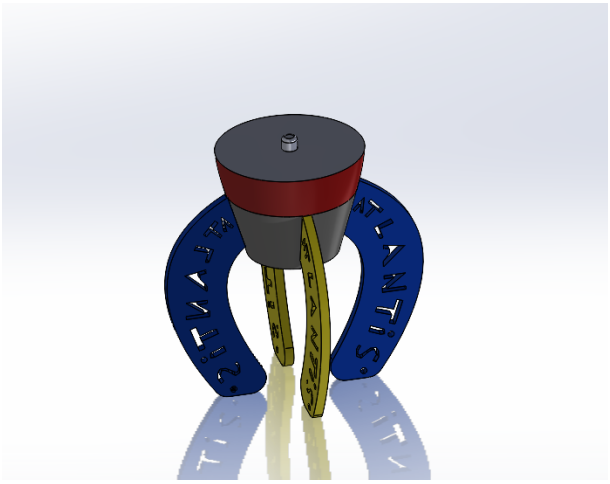
**For assembly you will require a 6000 bearing that can be printed (file below) and optionally 4x M4 15mm screws.**

## ASSEMBLY :

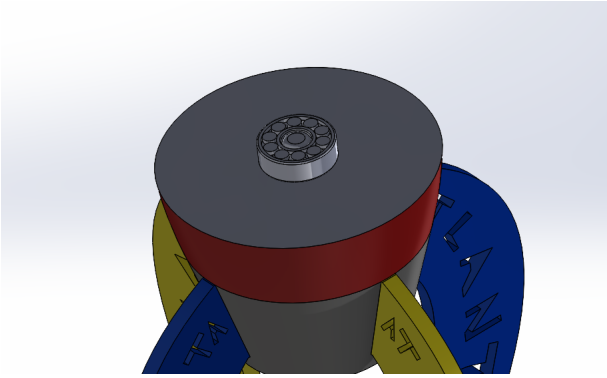
**First take your 4 printed legs and insert each into a hole on the bottom of the rocket body. Make sure it is pushed in all the way if fit is too loose use glue.**



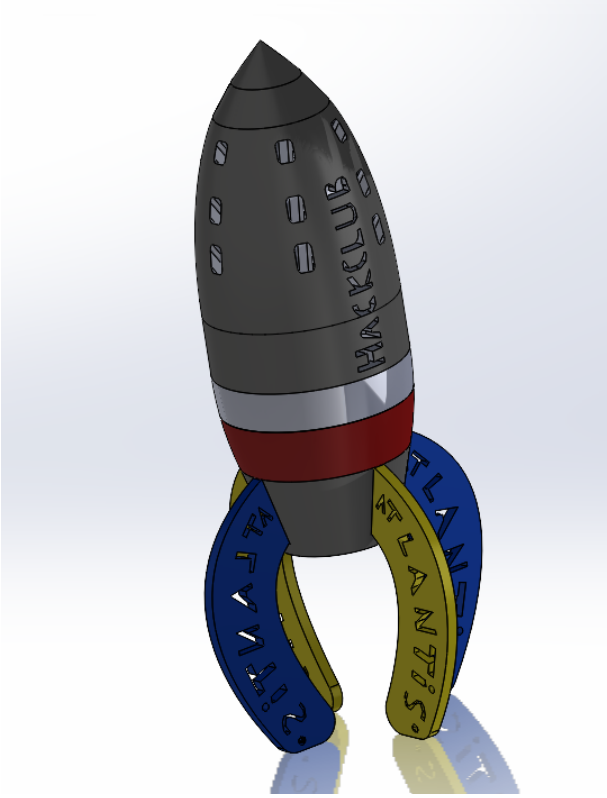
**You should now have something similar to this .->**



**Next push your 6000 bearing onto the center pin as shown ->**

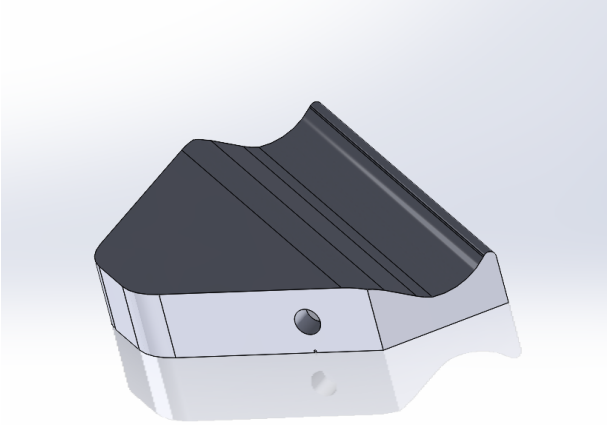


**Then simply press the top part of the rocket onto the bearing as shown ->**

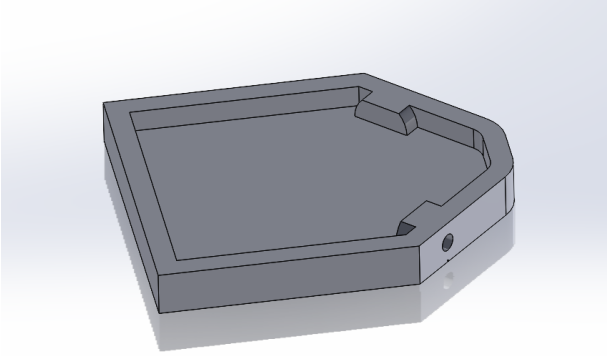


## That is the main body finished however if you wish for some extra functionality there are 2 attachments

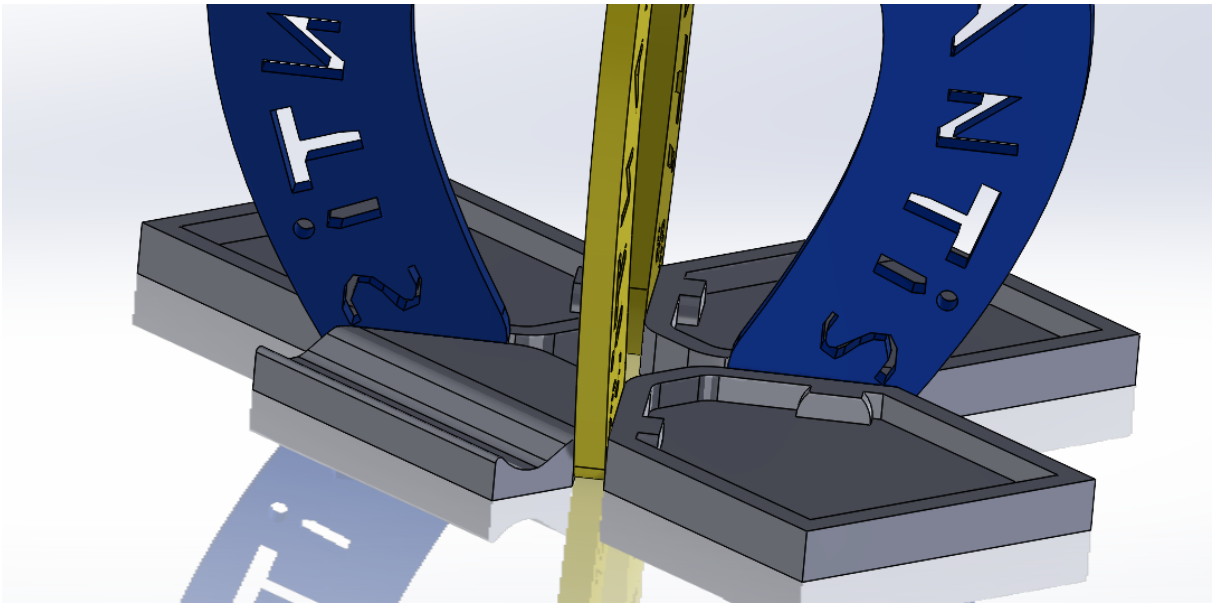
This phone holder one --->



This phone simple tray one --->



**These attachements can simply be slided next to the legs or you can use the M4 screws to secure them in place.**



Thank you for your interest, hope you enjoy this project :)
