Give your sim-racing setup a cobra-inspired shifter knob with a flared hood, detailed scales, a segmented belly and sculpted fangs.

Cobra 90 has a shortened neck and a widened grip surrounding the mounting socket. The scale detail continues around the back, while the lower section transitions into a smooth circular collar with a flat base.

The download includes two parts:

- Cobra shifter knob
- TH8S mounting adapter

The knob measures approximately 90 mm tall × 56 mm wide × 47.1 mm deep. Matching 3MF, STL and OBJ files are included, with the two parts separated in each file.

Import at 100% scale in millimeters. Changing the overall scale also changes the mounting fit. The 3MF contains the models and their arrangement; select your own printer and material profile in your slicer.

For printing, start with the knob upright on its flat base and the adapter resting on its wide flange. Inspect the sliced layers around the mouth, fangs, hood and mounting cavity. Add supports where needed and check that you can remove them afterward.

The silver finish and red eyes shown in the renders are a painting idea. The printable files contain uncolored geometry. Keep paint and filler away from the mounting surfaces.

The exported meshes have passed digital geometry checks. This version has not yet been physically test-printed, so mounting fit, strength and comfort still need to be checked.
