Summary

Small tea bag rest for your mug: the string slides into a 6.5 mm gap. Unprinted prototype.

[Household](#) > [Kitchen](#)

A small tea bag rest that sits next to your mug: the string slides into a narrow gap (6.5 mm) so the used bag stays put and drips into the holder instead of onto the table. Modeled parametrically in CadQuery; one watertight body. Unprinted prototype: I have only checked the geometry digitally, I have not printed it yet. Please test one print first. Not intended for food contact; use it only for the used bag. Print: PLA or PETG, 0.2 mm layers, 0.4 mm nozzle, 3 perimeters, 20% infill, as modeled, no supports.
