A functional phone stand with a distinctive **mechanical gear-inspired design**. Built for makers, engineers and anyone who prefers visible mechanics over an ordinary phone holder.

The adjustable mechanism lets you set a comfortable viewing angle for your phone while the wide base keeps the stand stable on your desk.

Features

- Mechanical gear-inspired design
- Fully adjustable viewing angle
- Stable desktop base
- Suitable for smartphones and smaller devices
- Great for videos, notifications, calls and desk use

- Multi-part design with a satisfying mechanical look

⚙️ **Mechanical by design**

The gears, joints and exposed mechanical details aren't hidden — they're the main feature. The result is a functional **desk phone stand** that also works as a small piece of mechanical decor.

Assembly

Print the individual parts and follow the assembly images included with the model. The modular construction also makes it easy to experiment with different color combinations.

If you print it, I'd love to see your version. Share a photo of your build!
