Summary

9 model Halloween Themed expansion pack for Autumn Harvest bundle.
Compatible with Lego Wreath & Brick Frame

[Household](#) > [Home Decor](#)

Tags: [halloween](#) [decoration](#) [legowreath](#) [brickframe](#)

This is an expansion pack of unique Halloween models designed specifically for the large-scale, 3D-printable brick ecosystem. Whether you are decorating a **Lego Wreath** or a **Brick Frame**, these models provide a high-detail, Halloween alternative to standard block shapes. In the photos shown they have been used in conjunction with

Every model in this set is optimized for **0.4mm nozzles** and designed to be accessible for single-extrusion printers through pre-configured color changes when needed.

Technical Specs & Printability

I have provided the dual colour models in **.3mf format** to make printing as seamless as possible for everyone.

- **Single Extruder Color Swaps:** No AMS or MMU required. The .3mf files include pre-configured layer pauses. Your printer will automatically stop at the correct height, allowing you to swap filament colors for the flower centers and petals.
- **The Support "Golden Rule":** To ensure the delicate geometry remains crisp and the supports peel off easily, you **must** set your **Top Contact Z Distance to 0.34mm**.
- **Nozzle Requirement:** Optimized specifically for **0.4mm nozzles**.

Recommended Settings

Setting	Value
Nozzle Size	0.4mm
Top Contact Z Distance	0.34mm
Material	PLA
Layer Height	0.16mm - 0.2mm
Walls	3
Infill	10% - 15%

Compatibility

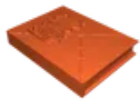

These harvest models utilize the standard connection systems found in the Mega-Brick community projects. Simply print, swap colors when prompted, and snap them into your display!

Note: Since this is a community-focused project, I highly recommend checking out the original LegoWreath and Brick Frame designs to see the bases these models were built to decorate.

NOTE: 3 of the models are remixes of models already found here to fit the wreath ecosystem and not my original creations the links to the originals follow

All post processing has been done with mettalic sharpies and cosmetics. The potion part of the cauldron is not necessary but if you do print it it slots into the cauldron and stays stable. Enjoy the prints and have a spooky halloween
