Classic JDM Tuner Shift Knob for TH8S

A sleek, classic JDM-tuner style shift knob for your Thrustmaster TH8S shifter. It features a slim, elongated cylindrical profile with a smooth rounded top and a tapered base. Four horizontal grooves provide excellent grip and a distinct retro-sporty aesthetic, perfect for quick, precise shifts.

Built for the standard Thrustmaster mount. The threads are modeled right into the base for a direct, adapter-free swap.

SIZE 32 × 32 × 135 mm (W × T × H)

PRINT SETTINGS

- **Orientation:** Upright / Threaded side down (best for clean threads and crisp grooves).

- **Layer height:** 0.12–0.16 mm (finer layers make a better thread and a smoother top curve)
- **Walls:** 4–6, infill 50–80 % gyroid (a higher infill gives the knob a heavier, more realistic solid feel)
- **Material:** PETG, ASA or PLA+
- **Supports:** None required

Printed in pure white filament, it perfectly mimics the iconic machined Delrin or nylon shift knobs found in legendary JDM builds.
