Summary

A support to keep tension based baby gates in place without needing screws in the wall.

[Household](#) > [Other House Equipment](#)

I wanted a solution to help keep our Regalo tension baby gates in place. (Our kids kept breaking through them like the Hulk!) I saw lots of solutions requiring screws in the wall, but I'm not a fan of that at all. I wanted a system that held the gate in place using only the door stop moulding to brace it. The pads rest in a circular cut out. Feel free to refine the design! At some point, I'd like to revise to make the tension pads sit a little deeper in the circles. I ended up printing this standing up (the orientation seen in the pictures) with supports for the extra rigidity; all the force would act along the length of the layers, rather than on the layer lines.
