Summary

Lets you screw the wen track saw track to a vertical or horizontal surface for cutting siding or fences.

The wen tracks only have one hole, so it's difficult to screw them to a vertical surface. This print slides into the outside track so you can add screw holes to hang from.

If your hanging on lap siding, these won't sit flush with the surface and you can crack the print by over-driving. I also blew out a few with the impact driver, so you might want to dial those down a bit.

If your using the transport end caps that came with the wen tracks, you'll have to remove these before you can put the transport end caps on.

I treat these like consumables and print cheap and large quantities.

I've included a .step file if you want to tweak it.
