Summary

Devil horns to stick on a monitor for flair

Art & Design > Other Art & Designs

Tags: decoration monitor horns

Overview

A matching set of left and right horns to be stuck onto your monitor if that's your vibe. The top of my monitor is flat, so I just made the bottom of the horns flat and mounted them using double-sided tape, but feel free to remix this as-needed for your monitor :)

Parameterization

I've not made it parametric, because I was just slapping this together after seeing something similar on MakerWorld (which I refuse to make an account for), but I've included the Fusion360 file if you want to modify it to suit your monitor.

Note: The right horn is just a mirror of the left horn, so if you want to make changes, make sure you go back in the timeline and modify the left horn so the mirror can capture it.

Print Settings

This is just decoration,so I doubt print settings matter, but for reference I printed it using 3DPrintingCanada's PLA+, and I had 15% gyroid infill. I also used concentric as the surface pattern because I personally think that looks nicer.
