A handy dual-sided resistor lead bending tool designed for quick and accurate forming of through-hole resistor legs.

Includes two bending options:

- **6.3 mm spacing slot** – ideal for standard 1/4W resistors and common Arduino projects
- **Larger resistor side** – designed for resistor bodies up to **10 mm** in diameter

Simply choose the appropriate side, insert the resistor, bend the leads over the edge, and you're done!

Perfect for electronics hobbyists, Arduino builders, and makers who want clean, consistent resistor bends without measuring each time.

The dual-sided design makes it easy to switch between standard resistors and larger power resistors, all with one compact tool.
