updated 10. 10. 2026 | published 10. 10. 2026

Summary

A simple, wall mountable cross with a crown of thorns around its center.

The original .STL file doesn't have a flat bottom, the intricate thorn design continues below the level of the cross, requiring extra supports. I fixed that "problem" for easier post-processing.

The fourth and fifth pictures compare the backs and fronts of the two crosses, with my remix on the left and the original on the right.

Suggested Print Settings:

- Material: PLA
- Walls: 2
- Layer Height: 0.2 mm
- Infill: 15%
- Brim: Unnecessary (unless you scale it down)

- Supports: On (there is a small overhang at the bottom of the thorns)

Only ~1.5 hour print at 15% infill!

Multicolor:

Insert pause between the last layer of the cross and the rest of the thorns.
Between layer 40 and 41 at 0.2 mm layer height.

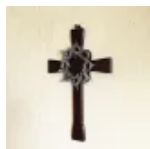

Post-Processing:

Remove supports at base of thorns.

Some stringing may occur at the top of the thorns. Just file it off.

Has a nail hole for mounting or you can use a command strip.
