Summary

Two World-Melding Nature with Technology

[Art & Design](#) > [Other Art & Designs](#)

Tags: [decoration](#) [art](#) [opticalillusion](#) [colormix](#)

Two Worlds brings nature and technology together in a single optical artwork. From the left, a turquoise tree reaches outward through warm orange leaves. From the right, the same palette resolves into circuit paths and circular connections. Both images occupy one ridged surface, with your viewing position deciding which world appears.

The branching tree and the connected circuit echo the patterns that carry life through nature and signals through technology. Designed for four-color 3D printing, the piece invites you to move, look again, and discover how much a change in perspective can reveal.
