Summary

A print-in-place dual dispenser with a recycle bin. Print with supports or use the built-in support version.

A print-in-place AA and AAA holder, including a separate recycle bin.

This is a pretty demanding print. Some tips:

- Use supports for the upper hooks, or print the version with built-in support.
- Make sure you have good bridging!
- After printing, take a good look inside and use an X-Acto knife or similar to remove any filament from failed bridging. The dispenser will not work if there is even a single strand of filament left hanging somewhere.
- I recommend you use lots of perimeters for the hooks.
