

## Keyboard switch hot swap base with LED (Geteron)

Error

[VIEW IN BROWSER](#)

updated 9. 10. 2026 | published 9. 10. 2026

## Summary

Fully 3D printed hot swap base for keyboard switch using Geteron socket with various size for leds

[Hobby & Makers](#) > [Electronics](#)

Compatible with Geteron hot swap socket 2.0.

The socket is pressed fit and doesn't really need glue but you can use tiny bit of super glue if you find it too loose for your liking.

LEDs have to be super glued in.

I provided an example file for 5x2 5050 leds using patterning the step file in cad software then i fill the gap with mounting holes afterward

Printed fine on 0.4mm nozzle with 0.2mm layer height.
