(If you find any of my models for sale online (ebay, amazon, etc) it is not me, i do not sell prints; especially not at those insane prices. They are all listed as non-commercial works. I do not have a patreon or kofi or any donation platform. These models are only listed here on printables, for free, for you to print or use a print service like PCBway or JLCPCB, or your friends.)

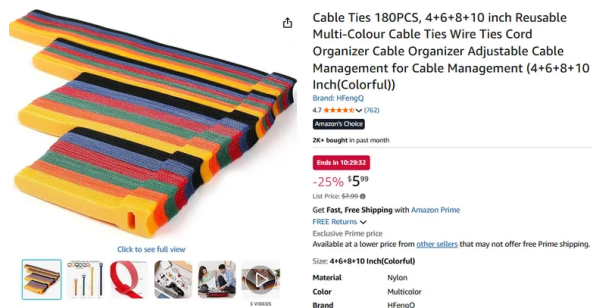

Made from official steam cad data!

No more 3d scanning and tweaking the fit.

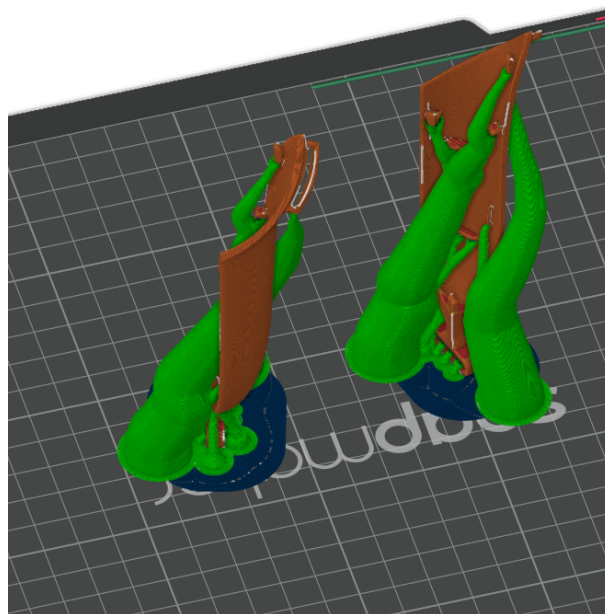

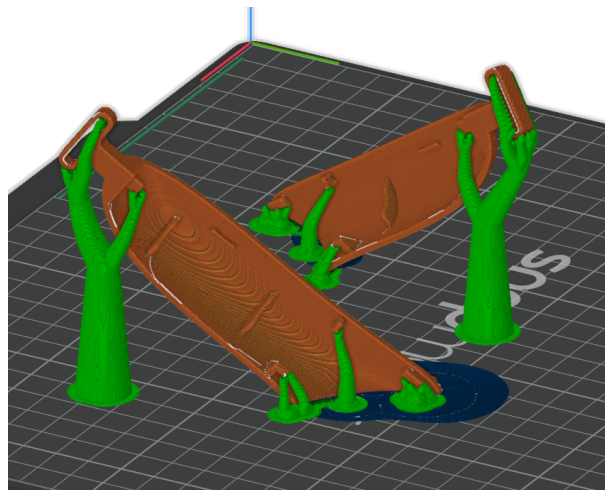

I reinforced the controller geometry to improve your ability to FDM print it.

Step included for remix.

Use velcro cable ties as your strap:

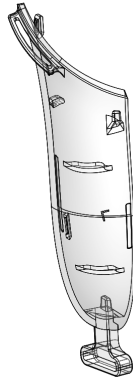

Print Vertical or upsidown with tree supports, 2x with 1 mirrored.

Update 5.5 10.9.26:

Strengthened the bottom peg.

Version without bottom ring included to use with key.

This remix is based on

Steam Hardware · GitLab
