This model has been designed for a specific size of bathroom scale. If you are to use this design please remember to adjust the model to fit correctly to your own personal bathroom scale.

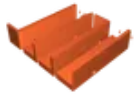

It's been designed to slide in and out. While requiring a small lift so that it in no way can accidentally slide out by itself. There are backstops so that you can't push it too far in as well. User friendliness was a high priority when designing it.

Since my print bed is only 220x220mm and i needed to print everything at once due to time savings i had to split my parts and use dowel connectors with glue as you can see in the pictures and in the print file. If possible i recommend printing it all in full parts with no cuts. If you can't it's okay and it works super well with some common plastic superglue.

Bonus tip. adjust the screw holes to whatever screws you have in stock so that you can avoid an extra trip to the hardware store / extra expense.

Printed with 20% infill, 0.4 mm nozzle
