[Toys & Games](#) > [Board Games](#)

What is it:

This is a 3D printed chess set, with a low-poly design inspiration.

Why did I make it?

I made this model due to the fact that I needed a project to CAD out, so I went into the Atlantis slack channel, and made the first suggestion.

Items required to build:

Superglue or other glue that works on the material you print in.

How to build and use:

Place glue in the holes of the base, then get the grate and place it within.
