A simple coffee table. It was printed on a Prusa XL, but it can be scaled to fit your printer's build plate (use the height as your reference dimension)

Material: PETG or PLA (PETG is better)

Perimeters wall:4

Infill: 20% Gyroid

Temperature plate: 90° for PETG

Temperature of the hot-end: 240° for PETG

Alternatively, you can use masking tape as a shim to fit the two halves together.
