Reupload of file repository <https://drive.google.com/drive/folders/1520uhv6a9ccqm5ezw5OWWhMHBmDMRee?usp=sharing>, as the file set is not public and is not accessible to most people.

This is all of the files I have for the "papaya" (Double Chin), "winter meadow" and "n2023 bluing". I cannot help if there are missing files or info from the set. There are steps and f3d of each item. There is no instruction set for the papaya and the other 2 files appear to be nonfunctional. There are some pictures that may help with assembling the papaya. The papaya is based on the flycore according to the xls that came with it. I assume the papaya is at least functional considering there is pictures of a real one existing (the real blaster pics are from Late_Race_2526). The xlsx is provided in picture form as printables does not support xlsx files.

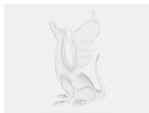

Credit to u/way_too_generic for creating the file set.
