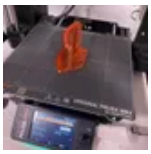
I couldn't find any 3d models I liked for storing my headset on a Skådis, so I remixed the one made by @Joe_1165648.

I printed this holder on one of its sides with maybe a bit too much support.

Used Filament: Anycubic PLA White.
Layer Height: 0.20mm.
Brim: Yes. The contact area of the part on the build plate is pretty small.
Supports: Yes, tree supports. The pegs require supports, but the main curvature for the Headset may not.
I put some there just to be safe.
Infill: 15% Gyroid.

Thanks to @Joe_1165648 for the original file!

This remix is based on



headphone hook - wall mount
