The Out of Darts Juno is a full-auto rival ball flywheeler "flamethrower" blaster designed by Tarik. As the spiritual successor to Luke's original Project HIR-mini and OOD Jupiter, the Juno has been reworked from the ground up with printability and maintenance in mind. Featuring custom CNC-milled Photon flywheels and a more modular gear motor mount, Juno is more reliable and higher-performing than its earlier cousins. Additionally, its oversized battery compartment and universal rear-loading magwell make this blaster great for extended indoor play sessions and Humans vs Zombies games -- especially when paired with the OOD Infinite Pack high-capacity remote-line hopper.

FEATURES:

- OOD Juno Rival Flywheel Blaster
- Full-auto nerf ball flamethrower
- Designed by Tarik

- Custom Photon Rival wheels with improved performance
- 130 FPS with Kraken
- Two-stage trigger
- Full auto with multiple fire rate motor choices.
- Different RPM pusher motors determine the rate.

PERFORMANCE:

Average FPS (Standard Deviation) with included Krakens + Photons on 3S

- ~130 FPS

FILES INCLUDED:

- 1 Extended Stock in two halves
- 1 ZIP Archive with more parts + customizations

RECOMMENDED PRINT SETTINGS:

- Quality: No scarf seams or joints
- Strength: 4-5 wall loops

HARDWARE NEEDED:

Our **Hardware Kit** includes everything you need to print and assemble this blaster, including:

- 2 Kraken Motors
- 1 pair Photon Flywheels
- 1 N20 gear motor
- 1 XT60 Battery Terminal
- 10 M3 x 10mm Socket Head Screws
- 7 M3 x 6.4mm Heat-Set Inserts
- 2 6 x 7mm Steel Ball Bearing Detent
- 62in 18AWG silicone hobby wire
