SHROOM STRESS BUTTON

Shroom Stress Button is an anti-stress fidget toy inspired by classic industrial emergency stop buttons (mushroom-shaped), designed to offer a super satisfying mechanical and acoustic feedback.

Thanks to the integrated "spring" inside the mechanism, it produces a crisp and tactile clack with every press. It's the ideal device to keep on your desk to release tension or regain concentration during study and work!

⚙ Main Features

- **100% 3D Printable:** No commercial buttons, metal springs, rubber bands, or screws needed.
- **Acoustic & Tactile Feedback:** The pressure mechanism creates a snapping sound and a mechanical resistance that feels very satisfying to the touch.
- **Iconic Design:** Industrial "Emergency Stop" style, perfect both as a stress-relief gadget and a cool desk decoration.
- **Easy to Assemble: Components designed for simple and clean assembly.**

Print Settings & Materials

- **Internal Spring:** If desired, you can print it in PETG so it is more resistant to stress over time.
- **Body and Button:** Can be printed in PLA (or PETG) in your favorite colors.
- **Layer Height:** 0.16 mm or 0.20 mm
- **Infill:** 15% - 20% (Gyroid or Grid) for good structural strength.
- **Supports:** Not necessary
