A compact, rugged-style case for **two Sony NP-FZ100 batteries and your choice of memory cards**. The hinged lid, reinforcing ribs, and separate latch keep everything together in one organized package.

Choose the card layout that matches your camera setup:

- **SD:** 3 × full-size SD cards
- **CFexpress Type A:** 3 × CFexpress Type A cards
- **Mixed:** 2 × SD cards + 1 × CFexpress Type A card

All three versions hold two NP-FZ100 batteries. CFexpress Type B cards are not supported.

The batteries and cards sit slightly above their compartments for easy removal.

Printing & assembly

Print the fit-test piece first to check the battery and card fit before printing the complete case.

The included **3MF has the base, lid, and latch arranged together on one plate**, ready to print in a single run.

For assembly, you'll need **3 × M3 × 20 mm socket-head screws**. All screws use the same length and thread directly into the printed plastic—no nuts or inserts required.

This design is a remix of [SuperWilli's Fujifilm NP-W126S Battery Case](#), adapted with revised battery/card layouts and hardware details.
