This is a 3d printable Pegboard mounted display stand that holds 4 Lego minifigures. I recommend printing in PETG, but PLA worked fine for me. If printing in PLA, the fit may loosen over time if the figures are taken on and off too much. Due to the difference in printer and filament quality, your stand may be loose or tight so you may need to scale the model. Also, **not all pegboards are created equally!** I designed this to fit standard pegboard that I got at Home Depot. If it is too loose or too tight on the board, that's why. I designed this stand in Fusion and printed it in Bambu PLA Matte using my Bambu P1S printer. **I also have non-pegboard mounted stands for 1, 2, 3, 4, and 5 minifigures**, so go check out my profile for more cool models. Please let me know how your print went and

if you have any questions or problems, I am also very grateful for every download, like, rating, and follower.
