Air through adapter to allow a hpa hose to be connected to your marker / rif through the rear when using a SARB-15 bullpup ar15 kit.

Designed to print in firm plastics like pla, petg etc. if printed in rubber you'll need to adjust the design as it has soo much flex and movement. While it works it's not as neat so use a decent amount of infill 20%+ for you, but fine at 7-10% in hard.

No supports needed on a printer that can handle small bridges well.
