Woodland Log Container with Mushrooms

Bring a little woodland magic to your 3D printing projects with this log-inspired container, decorated with mushrooms growing along the outside!

This model would look especially nice printed in multiple colors to bring out the details of the bark and mushrooms, but feel free to experiment with your own filament colors and finishes.

Print Tips:

- The mushrooms require supports.
- I used slim tree supports for my print.

I'm sharing this model for free under a **non-commercial, no-derivatives license**. You are welcome to print it for personal use, but please do not

sell the model or physical prints, redistribute the files, or remix and share modified versions.

What would you use this little woodland log for? I'd love to hear your ideas!

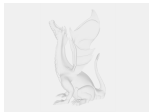

Happy printing!
