Model a day challenge - Day 1

This is just a simple toothbrush holder/stand I designed.

I travel a lot for work and use one of the standard tube style toothbrush cases, which is great to keep the bristles protected in my bag but I end up having to leave the toothbrush laying on the sink.

This little travel holder/case/stand is designed to protect both the bristles and provide a stand so you can keep the brush off the surfaces in your hotel/motel/minesite room.

I have printed this in PLA as proof of concept, which is not known to be food safe, for longterm use I recommend printing in a food safe filament or coating the model in a foodsafe resin.

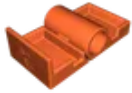

Printed with:

- 0.4mm Nozzle
- 0.2mm Layer lines
- 4 walls (personal preference)
- 10% infill (personal preference to keep light weight)
