updated 17. 10. 2026 | published 17. 10. 2026

Summary

Store a filament spool flat against the board, then swing it out 90° so it can feed a printer. Not tested yet.

One holder, two positions. Closed: the spool sits flat in front of the board with the label facing you. Swung out: the arm turns 90° and the spool sticks straight out so it can spin and feed a printer.

NOT TESTED: this design has not been printed yet.

- Hinge with a printed pin and a click into both positions (0° and 90°)
- 50 mm axle for spools with a 52–58 mm hub hole (such as Bambu Lab spools)
- Small barb on the axle keeps the spool from sliding off
- Two clips slide into the base and hook into the pegboard
