Angle Cutter, Angle-cutting aid

A simple yet very useful model.

I am working on a large topographical project: creating a **3D model of the High Tatras mountain** range. They are beautiful mountains, and since I live nearby, I want to have a model of them on my wall.

I am currently building a wooden frame for the model and need to cut precise angles. I lost my old angle cutter, so it's great to be able to use 3D modeling and printing to make my own.

The width of the saw blade slot is 1.7 mm, suitable for a hacksaw blade.
For cutting objects up to 50 mm in width.
