A pockettoy inspired by Mighty Max. Daring Dax finds himself in a spider dungeon. Unfortunately there are also ghosts in there. Will Dax escape the spider dungeon?

for all hinges i used a piece of filament. i melted the ends with a soldering iron, but glue will work too.

i printed the branch, the door, the prison gates, the stairs, the big spider, the spider string, the fireplace in TPU.

I recommend printing the door in TPU. it squeeks fantasticly like an old rusty door.

Print the thin spider string in TPU. Guide it trough the branch and glue it to the big spider.

alternatively you could use a string of your choice and glue it on the big spider.

Painting: i started with a dark gray color for the cracks, and then i went over it nearly dry with a lighter gray color to bring out the stone texture.
