Summary

This is a kit that invisibly and easily fixes your sagging drivers side under dash panel.

Time to restore your interior! The pieces in this kit are meant to replace the existing/broken mounting points for the drivers side under dash panel in your BMW E38 7 Series. The pieces are meant to be printed in ABS so that they can be solvent welded to your interior panel (which is also ABS). In the pictures above you can see the pieces printed in white ABS (black would be a better choice, printed in white for clarity). The intended location for each piece can be seen in the photos. The glue I used is also in the photos, and can be found at your local hardware store.

I have been using a repaired dash panel (with this kit) in my car, for 8 months (as of 10/26). Everything still looks and works great!

I have included the .step files for anyone who wishes to modify any of the pieces.
