A compact tape measure holder designed to work with the **T-Clip system**.

This is my own design, inspired by the many other models and storage solutions available on Printables. The holder is designed specifically for a tape measure measuring approximately **69 × 27 × 65 mm (L × W × H)**.

Support-free rear pegs: The rear pegs are designed to print without supports and help prevent undesired movement when mounted on the pegboard.

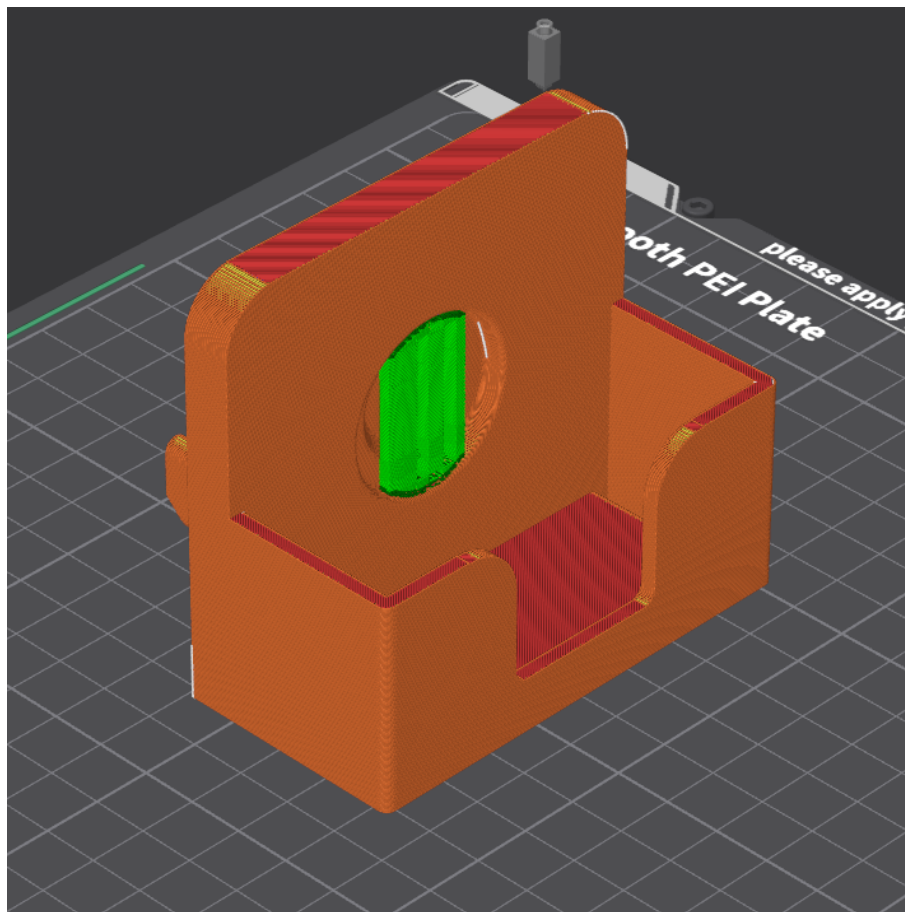

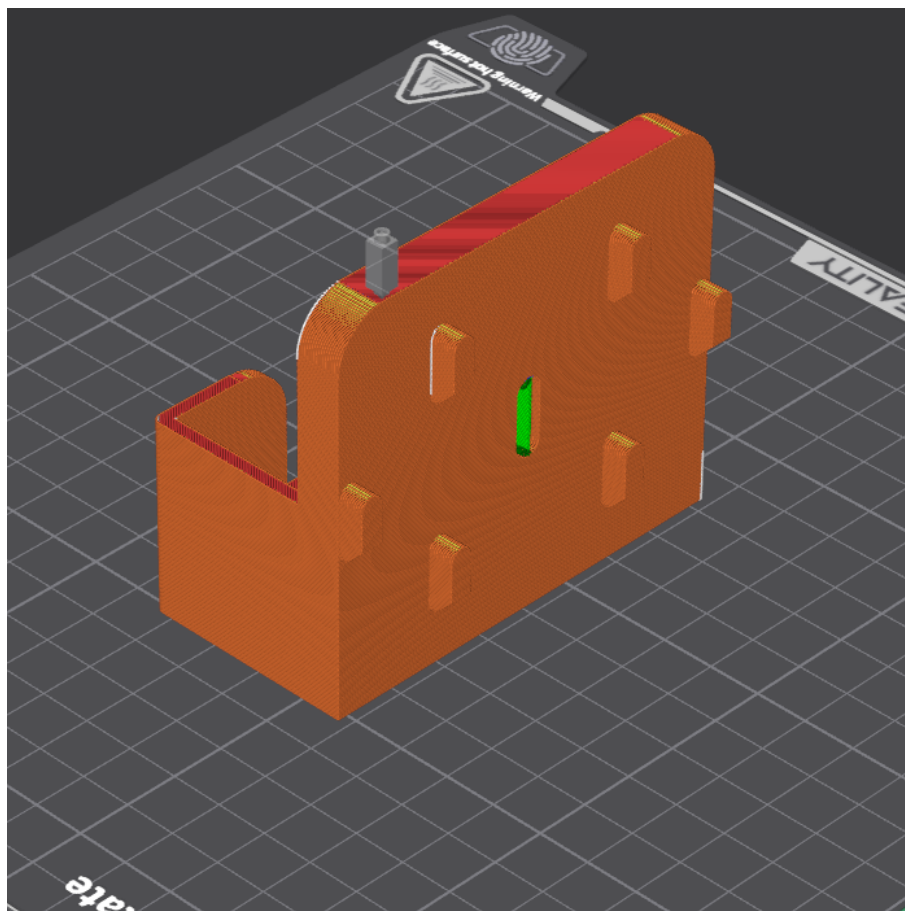

It provides a simple and accessible way to keep your tape measure organized and readily available in a workshop, workspace, or tool-storage area.

Print Orientation and Parameters

The model should be printed upright. Supports are only required inside the T-Clip mounting system, while the rear pegs can be printed without supports.

I printed my holder using **4 wall loops** and **10% gyroid infill**.

I recommend printing this model in **PETG** for improved durability and resistance to wear.

You can download the original T-Clip model from:
