Summary

A construction square holder inspired by Sonark's design, redesigned to use the SKADIS T-clip mounting system.

Inspired by the **SKADIS - Construction Square Holder** model created by [@Sonark](#), this remix retains similar dimensions while adapting the design to use the SKADIS T-clip mounting system.

The original design was already a practical solution for organizing construction squares, but I noticed that its mounting system could be adapted to use T-clips.

The rear pegs are designed to print without supports and help prevent unwanted movement when mounted.

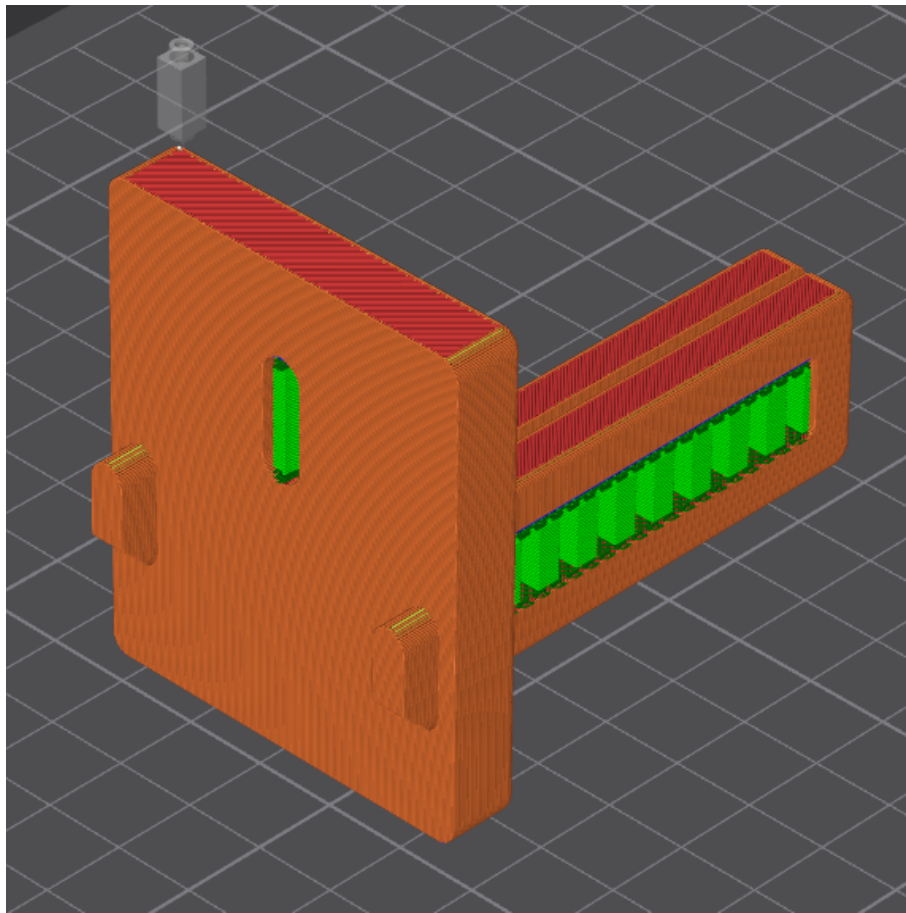

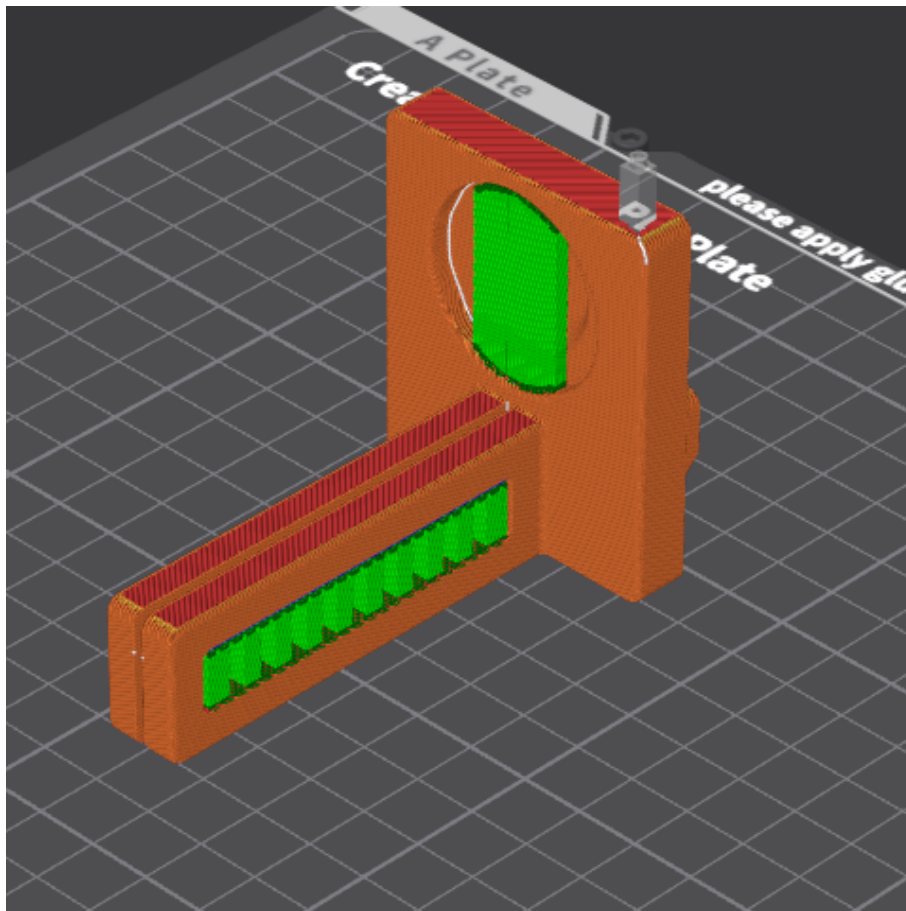

A simple modification focused on improving compatibility with my preferred mounting system while keeping the original concept and functionality.

Print Orientation and Parameters

Option 1: Upright

For this option, the model should be printed in the orientation shown in the pictures. Supports are required inside the T-Clip mounting system, while the rear pegs can be printed without supports. However, due to the middle section of the model, this orientation requires more support material overall.

I recommend printing this model in **PETG** for improved durability and resistance to wear.

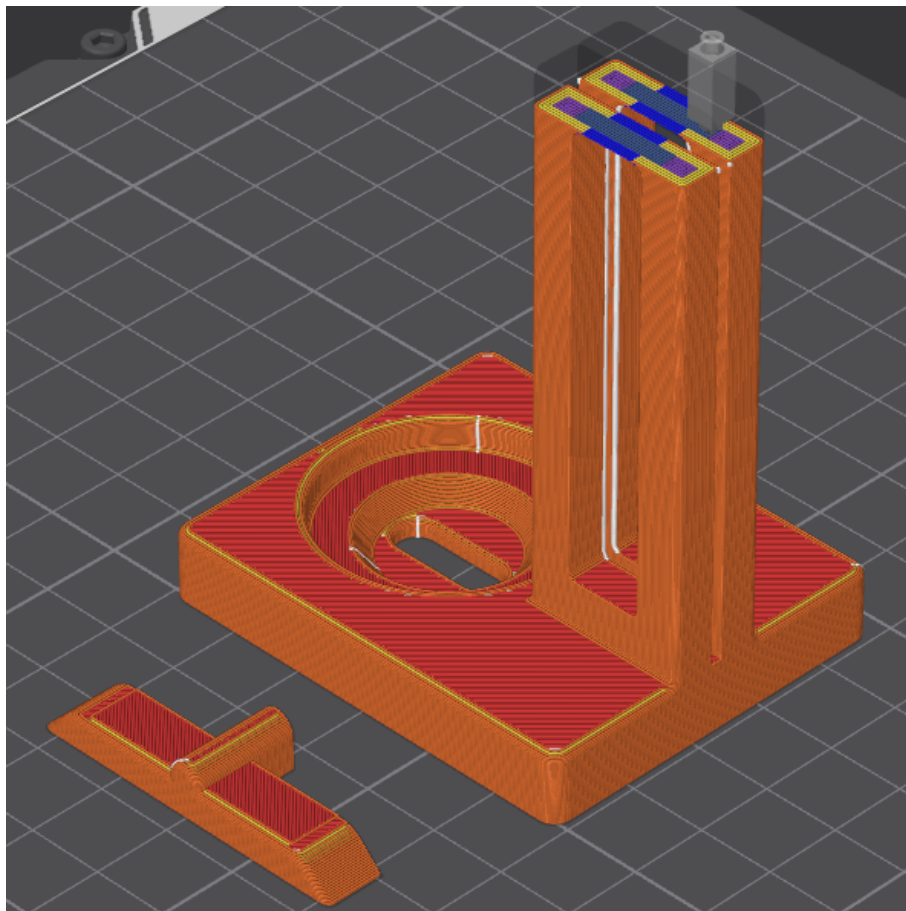

Option 2: Flat

For this option, the model can be printed flat on the build plate. Printing in this orientation requires less bridging than Option 1 if supports are not used, so keep your printer's bridging capabilities in mind when choosing this method.

I printed my holder using this option with **4 wall loops** and **10% gyroid infill**.

An additional mounting lock is included with this version. It fits underneath the mount to help prevent unwanted movement and keep the holder securely attached to the SKADIS pegboard.

Note: Please check the dimensions and fit with your construction square and SKADIS setup before printing.
