I found no solutions to mount RUTX50 in 10-inch rack with a height of 1U, so I rolled my own. Router has exactly the right height, so it was just a matter of adding the sides. My design id made around original RUTX50 CAD model, so curvature fitment is perfect. Print is silver sprayed to match the version I have got. To fix the brackets to the router's side slots you would need a few M3 8mm long screws. I have publish different variations of the left brackets with a power switch and opening for the power cable or without it.

Power switch used: <https://amzn.eu/d/0cjpmwf0>
