updated 27. 10. 2026 | published 27. 10. 2026

Summary

Small bats for Halloween wall decorations. Easy to print. The living hinge lets you bend the wings as you like.

Add a spooky touch to your walls with these 3D-printable Halloween bats. Arrange them individually or create a flying swarm.

When mounted outdoors on your front door, the bats wings move in the wind.

Printing and assembly

- Two thickness options are available.
- Print in PLA or PETG.
- You can scale the bats along the X and Y axes in your slicer. Keep the Z height at either **0.6 mm or 2 mm**, depending on the version you choose.
- Let the print bed cool completely before removing the bats.

- Carefully bend the wings along the groove to activate the living hinge.
- Attach the bat to a wall or door using double-sided or photo-mounting tape.

The bats shown in the photos were scaled to **50-60%** along the X and Y axes.

Happy Printing
