updated 21. 10. 2026 | published 21. 10. 2026

Summary

This is a 3d print with 2 mounts for Apple Magsafe(25watt/Braided cable) That goes over the existing Charging pad.

My Polestar 3 will still read my NFC key off my Fold 8 on the left hand side. I printed mine with Fuzzy skin making sure to not make the inside of the charging puck area Fuzzy.

Feels a little loose in the charging tray without a phone attached, but with my Fold 8 on the left or my wifes Iphone on the right it is pretty sturdy and does not move around much.

To print this i suggest panting the outside of the print with Fuzzy skin, it seems to help with Fitment a little bit.

You will need to print with Supports , I left mine on defaults after enabling(Tree Auto, Default, 30 and remove small overhangs)

Printed in ASA because it sits in the car.

You will need 2 Apple magsafe pucks i used 2 of the newer 25watt ones but from the original model v1 should also work.

This will overlap your volume wheel a little bit but in my experience it is still usable with a Fold 8 upside down or a Iphone 18 pro.

This remix is based on

Volvo EX90 MagSafe Charger Tray
