Trays to hold your BlueSCSI Ultra in the rear expansion slot space in your Amiga 3000. Your SD card and USB C port will be accessible from the rear of the machine. No more taking the case off! Well not for this at least.

Printed in Elegoo PLA+. You may want to use a more heat resistant material if your machine will be hot.

One model for the top slot.

One model for either of the middle two slots.

The part is printed quite thinly so do take care when fitting.

I suggest:

Install the card with 3 x 6mm M3 screws into the bracket

Attach SCSI and power cables

Install bracket into slot

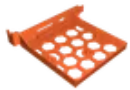

Secure with screw

The top slot requires using the Berg power connector rather than Molex unless you like your Amiga to run without a case lid :)

Non-commercial remixes are permitted. Feedback and improvement suggestions are welcome.

Post your pictures. I'd love to see this being used.
