Summary

Genelec 4020C Pi Zero 2 W Mount

Hobby & Makers > Electronics

Genelec 4020C Pi Zero 2 W Mount

Made this to replace my HEOS speakers.

This mount attaches a Raspberry Pi Zero 2 W together with a Waveshare PCM5122 DAC to the back of a Genelec 4020C speaker.

07/19-2026: The first version prevented the speaker from tilting because the RCA connectors on the DAC interfered with the wall mount. This revised version angles the Pi/DAC assembly, allowing the speaker to tilt normally.

The mount is designed around the original Genelec 8000-422W wall mount and fits behind the speaker while keeping the installation compact and clean.

Printing

- Print floating with supports.
- No additional hardware beyond the original mounting hardware is required.

Compatible with:

- Genelec 4020C
- Genelec 8000-422W wall mount
- Raspberry Pi Zero 2 W
- Waveshare PCM5122 DAC
- And probably more Genelec speakers.
