### Zip Tie Clips — 1-Inch Stick-On Cable Mounts

A loose cable gets snagged, kicked and tangled. These are the classic stick-on zip tie mounts, printed instead of bought: stick one down, run a tie through it, and the cable stays where you routed it. I printed a plate of 14 and put them to work under my desk and along the cable for the light on my desk hutch.

#### WHAT MAKES IT WORK

► Flat 1-Inch Base — The square bottom takes a square of double-sided foam mounting tape.

- ▶ Four-Way Tie Tunnel — A bridged hub in the middle leaves a tunnel in both directions, so the tie runs whichever way the cable goes.
- ▶ Standard Ties — The tunnel is 5.5mm wide, so common 4.8mm (3/16") ties and anything narrower fit.
- ▶ Cheap To Make — About 20 minutes and under 2 g each, so print a whole plate.

## HOW TO INSTALL

- ▶ Cut a square of double-sided foam mounting tape about 1" across and press it onto the base.
- ▶ Wipe the spot clean and dry, peel the liner and press the clip down firmly.
- ▶ Thread a zip tie through the tunnel, around the cable, and pull it snug.
- ▶ Trim the tail flush.

## PRINT SETTINGS

The 3MF has one clip on the plate. Add copies in your slicer to print a batch.

- ▶ 19 m 55 s and 1.89 g per clip, 0.63 m of filament

0.08mm layer height · 3 walls · 15% gyroid · 5/5 top and bottom · no supports · brim optional · PLA · 207 °C nozzle (220 °C first layer) · 60 °C bed · 0.4mm nozzle

## THE NUMBERS

- ▶ Size: 25.4 x 25.4 x 6.35mm (1 x 1 x 1/4")
- ▶ Ties: up to 4.8mm (3/16") wide
- ▶ Also needed: zip ties and double-sided foam mounting tape

Happy printing!
